Biology 12 - Mrs. Becker's Website

The human circulatory system functions to transport blood and oxygen from the lungs to the various tissues of the body. The heart pumps the blood throughout the body. The lymphatic system is an extension of the human circulatory system that includes cell-mediated and antibody-mediated immune systems.

Human Circulatory System - CliffsNotes Study Guides

Biology 12 - Circulation Study Guide What are the three types of blood vessels in the circulatory system? What are the functions of each? -arteries: carry blood away from the heart. -veins: carry blood from capillaries back to the heart -capillaries: microscopic tubes that allow for exchange of nutrients, wastes, and gases between

4. Digestive system 5. What is respiration? 6. Respiration in human beings. 7. Circulatory system in humans. 8. Lymphatic system. 9. Transportation in plants. 10. Excretion in human beings and plants.

Human Heart | Circulatory System | Class 10 Biology

This case study was made for a high school anatomy class, and may not be appropriate for younger audiences. Students should have already completed the chapter on the circulatory system and have a strong foundation in how the circulatory system works.

Case Study - A Tiny Heart

And I looked it up-- it takes the average red blood cell to go from one point in the circulatory system and go through the whole system and come back, 20 seconds. That's an average because you can imagine there might be some red blood cells that get stuck someplace and take a little bit more time and some go through the completely perfect route.

Circulatory system and the heart (video) | Khan Academy

As one of the basic life sciences, anatomy is closely related to medicine and to other branches of biology. This site is meant to compliment a high school level anatomy class. It contains worksheets, images, study guides and practice quizzes to support a rich curriculum in anatomy and physiology.
